

The Effects on Wildlife

ghadii
"animal"

If the Proposed Site C Dam were to be constructed

- BC Hydro says that the Site C reservoir will not become a barrier to wildlife movement – we disagree
- BC Hydro is not assessing the impacts of erosion on wildlife movement but did for vegetation – this is unacceptable
- Overall BC Hydro is not properly assessing the potential impacts on ungulates (moose, deer, elk) in a meaningful way
- BC Hydro is not properly assessing the impacts of the project on the Treaty Right to hunt.

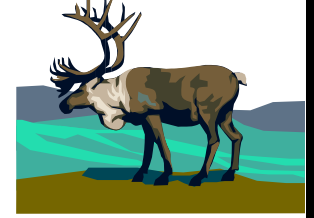

- There are serious questions remaining about the status of the moose populations in this region
