

Devil's-club (*Oplopanax horridus*) a member of the ginseng family and common in moist forests of the coast and interior including Pine Pass.

The Royal BC Museum PEACE Project Plant ID Workshop

Join Royal BC Museum Curator of Botany Dr. Ken Marr at this free two-day workshop as he shows you how to identify plants in the wild.

In this hands-on workshop, Ken will review basic terminology, the use of plant ID “keys” and features you can use to ID plant families.

The free workshop is suitable for beginners and for specialists looking for a refresher in plant family identification. Invasive plant field staff, biologists interested in plant identification and field technicians will likely find this course interesting.

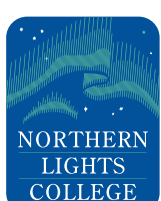

June 14 & 15 | 9:00 am – 4:00 pm
Northern Lights College Biology Lab

Student registration June 14, 8:45 am

Workshop includes morning and afternoon breaks and a lunch break.

To register, please email peaceproject@royalbcmuseum.bc.ca
or call 250 793-5304

Northern BC alpine landscape

Free Lecture—New Plant Discoveries from Northern BC's Alpine

Join Royal BC Museum Curator of Botany Dr. Ken Marr at this free evening lecture as he discusses recent plant discoveries in the high reaches of Northern BC.

Ken's presentation will cover images of the landscapes in which he and his Royal BC Museum colleagues have collected specimens, rare plants, common plants, a pseudoflower, a puzzling gap in the distribution of several species and what we are learning from DNA markers about the migration of several species.

He will provide many, many images of flowers!

June 15 | 7:00–8:30 pm
